CHAPTER 1 BASIS OF DESIGN	1
1.1 General	1
1.2 Fundamental Requirements	1
1.3 Design Service Life	2
1.4 Limit State Design	2
1.5 Loads and Actions	3
1.6 Material Properties	4
1.7 Basic Design Rule	5
1.7.1 Ultimate Limit State (ULS)	5
1.7.2 Serviceability Limit State (SLS)	6
1.7.3 Durability Limit State (DLS)	6
1.7.4 Relevant Limit States	7
 CHAPTER 2 MATERIAL CHARACTERISTICS	 8
2.1 General	8
2.2 Concrete	8
2.2.1 Concrete strength grade	8
2.2.2 Stress-strain curve for concrete in compression	9
2.2.3 Modulus of elasticity	11
2.2.4 Concrete tensile strength	11
2.2.5 Poisson's ratio	11
2.2.6 Thermal characteristic	11
2.2.7 Shrinkage and creep	12
2.2.8 Fatigue strength	14
2.3 Reinforcing Steel	15
2.3.1 Steel strength grade	15
2.3.2 Stress-strain curve for steel in tension	15
2.3.3 Modulus of elasticity	16
2.3.4 Poisson's ratio	17
2.3.5 Thermal characteristic	17
2.3.6 Fatigue strength	17
2.3.7 Compressive strength	17
2.4 Prestressing steel	17
2.4.1 Prestressing steel strength grade	17
2.4.2 Stress-strain curve	17

2.4.3	Modulus of elasticity	18
2.4.4	Bond properties	19
2.4.5	Thermal characteristic	19
2.4.6	Relaxation	19
2.4.7	Fatigue strength	19
CHAPTER 3 LOADS AND ACTIONS		21
3.1	General	21
3.2	Characteristic Values	21
3.3	Permanent Loads	22
3.3.1	Dead load	22
3.3.2	Earth pressure	22
3.3.3	Hydrostatic pressure	23
3.4	Variable Loads	23
3.4.1	Live load	23
3.4.2	Wind load	24
3.4.3	Fluid dynamic force and wave action	24
3.4.4	Earthquake action	25
3.4.5	Temperature effect	25
3.4.6	Differential settlement	25
3.5	Accidental Loads	26
3.6	Construction Loads	26
3.7	Impact Loads	26
3.8	Environmental Actions	26
CHAPTER 4 STRUCTURAL RELIABILITY AND ANALYSIS		27
4.1	General	27
4.2	Statistic in Structural Concrete	27
4.2.1	Structural reliability	27
4.3	Structural Safety	29
4.4	Load Factor	30
4.4.1	General	30
4.5	Partial Safety Factor	31
4.5.1	Materials	31
4.5.2	Members	31
4.5.3	Structural Analysis	31
4.6	Structural Analyses	32
4.6.1	General	32
4.6.2	Structural response of ultimate limit state	32

4.6.3	Structural response of serviceability limit state	33
4.6.4	Structural response of durability limit state	33
4.6.5	Structural response of relevant limit states	33
CHAPTER 5 ULTIMATE LIMIT STATE		34
5.1	General	34
5.1.1	Design principle	34
5.1.2	Design strength of structural concrete	34
5.1.3	Limit states of strain gradient	37
5.2	Flexure	37
5.2.1	General	37
5.2.2	Flexural strength	39
5.2.3	Ductility and percentage of reinforcement	40
5.3	Tension and Compression	41
5.3.1	Axial tension	41
5.3.2	Axial compression	41
5.3.3	Interaction diagram	42
5.4	Shear	45
5.4.1	General	45
5.4.2	One-way shear	45
5.4.3	Punching shear	47
5.4.4	Deep beam shear	47
5.4.5	In-plane shear	49
5.5	Torsion	50
5.5.1	General	50
5.5.2	Torsional capacity for member cross-section	51
5.5.3	Torsion capacity of torsional reinforcement	51
5.6	Stability	54
5.6.1	Rigid body stability	54
5.6.2	Flexural member (lateral stability)	54
5.6.3	Thin wall structure	54
5.6.4	Slender compression member	56
CHAPTER 6 SERVICEABILITY LIMIT STATE		60
6.1	General	60
6.1.1	Principle	60
6.1.2	Actions and action effects	60
6.1.3	Material properties	61
6.2	Limit State of Stresses	62

6.2.1	General considerations	62
6.2.2	Stresses in concrete	62
6.2.3	Stresses in steel	62
6.3	Limit State of Cracking	63
6.3.1	Requirement	63
6.3.2	Limit crack width	63
6.3.3	Calculation of crack width	64
6.3.4	Flexural cracks	65
6.3.5	Shear cracks	66
6.3.6	Torsional cracks	66
6.4	Limit State of Deformation	66
6.4.1	Requirements	66
6.4.2	Instantaneous deformation	66
6.4.3	Long-term deformation	67
6.4.4	Limit state of deflection	68
6.5	Limit State of Vibration	69
6.6	Limit State of Fatigue	71
6.7	Limit State of Fire Rating	71
CHAPTER 7 DURABILITY LIMIT STATE		73
7.1	General	73
7.1.1	Principle	73
7.1.2	Exposure classes	73
7.1.3	Durability criteria	74
7.2	Durability Requirement	74
7.2.1	Deterioration mechanism	74
7.2.2	Chemical actions	74
7.2.3	Physical actions	75
7.2.4	Mechanical action	75
7.3	Durability Limit State	75
7.3.1	General impact	75
7.3.2	Chemical impact	75
7.3.3	Physical impact	76
7.3.4	Mechanical impact	76
CHAPTER 8 DESIGN OF STRUCTURAL MEMBERS		80
8.1	General	80
8.2	Slabs	80
8.2.1	General requirement	80

8.2.2	Cantilever slabs	81
8.2.3	One-way slabs	82
8.2.4	Two-way slabs	85
8.2.5	Flat slabs	86
8.3	Beams	92
8.3.1	General requirement	92
8.3.2	Isolated beam	96
8.3.3	Continuous beams	96
8.3.4	Deep beam	99
8.3.5	Corbels	100
8.4	Column	102
8.4.1	General requirements	102
8.4.2	Short column	102
8.4.3	Long column	105
8.4.4	Shear in column	105
8.5	Rigid Frame	105
8.5.1	General requirements	105
8.5.2	Non-sway frame	107
8.5.3	Sway frames	109
8.6	Walls	110
8.6.1	General requirements	110
8.6.2	Isolated wall	112
8.6.3	Core wall	113
8.7	Footing	113
8.7.1	General requirement	113
8.7.2	Spread footing	114
8.7.3	Pile footing and pile caps	117
8.7.4	Combined footing and mat foundation	117
CHAPTER 9 PRESTRESSED CONCRETE		120
9.1	General	120
9.1.1	Definition	120
9.1.2	Prestressing concept	120
9.1.3	Prestressing stages	120
9.1.4	Conformance standards	120
9.2	Types of Prestressing	121
9.2.1	Prestressing system	121
9.2.2	Prestressing structure	121

9.3	Initial Prestress	121
9.3.1	Prestressing steel	121
9.3.2	Time of prestressing	122
9.4	Losses of Prestress	122
9.4.1	Immediate losses	122
9.4.2	Time-dependent losses	124
9.5	Design Consideration	125
9.5.1	Design criteria for prestress	125
9.5.2	Design requirements	126
9.5.3	Design of prestress	127

CHAPTER 10 COMPOSITE STEEL AND CONCRETE STRUCTURE 128

10.1	General	128
10.1.1	General provision	128
10.1.2	General requirements	128
10.2	Design Method	128
10.2.1	Selection of steel	128
10.2.2	Shear connector	128
10.2.3	Effect of shrinkage and creep of in-filled concrete	129
10.2.4	Limit states during erection	129
10.2.5	Structural performance	129
10.3	Composite Decks and Girders	129
10.3.1	Structural composite types	129
10.3.2	Ultimate limit state	130
10.3.3	Serviceability limit state	132
10.3.4	Structural details	132
10.4	Composite Columns	133
10.4.1	Types of composite columns	133
10.4.2	Ultimate limit state	133
10.4.3	Serviceability limit state	133
10.4.4	Structural details	133

CHAPTER 11 STRUT-TIE MODELS 135

11.1	General	135
11.2	Strength of Struts	136
11.2.1	Concrete struts	136
11.2.2	Reinforced concrete struts	138

11.2.3	Confined concrete struts	138
11.3	Strength of Ties	139
11.3.1	Steel ties	139
11.3.2	Concrete ties	140
11.4	Strength of Nodes	140
11.4.1	General	140
11.4.2	Compression nodes	140
11.4.3	Anchorage of reinforcing bars	140
CHAPTER 12 STRUCTURAL DETAILS		142
12.1	General	142
12.1.1	Structural members	142
12.1.2	Concrete cover	142
12.1.3	Clear distance	143
12.2	Bar Bending and Development of Reinforcement	144
12.2.1	Standard hooks	144
12.2.2	Longitudinal reinforcement	145
12.2.3	Stirrup, tie and hoop	145
12.2.4	Other reinforcement	145
12.3	Development of Reinforcement	149
12.3.1	General requirements	149
12.3.2	Critical sections for development of reinforcement	149
12.3.3	Development length	151
12.3.4	Anchorage, lap splice and termination of bars	152
12.3.5	Mechanical anchorage	153
12.4	Structural Details	153
12.4.1	Slabs	153
12.4.2	Beams	156
12.4.3	Columns	158
12.4.4	Rigid frame	160
12.4.5	Wall	162
12.4.6	Footing	163
12.5	Special Details	166
12.5.1	Corner	166
12.5.2	Edge	166
12.5.3	Opening	169
12.5.4	Supports	169
12.5.5	Joints	170

Appendix

Appendix A.	173
Appendix B.	174
Appendix C.	178

LIST OF ILLUSTRATIONS
